Agile delivery and transformation

10 years
working in Canada

profile

Product leader across banking, fintech and enterprise technology in Canada and Latin America. I turn complex or stalled initiatives into working capabilities, align business and technology around clear product direction, use MVPs and incremental delivery to build trust, and create operating models that make successful delivery repeatable and remain in use after launch.

AI & emerging tools

Hands-on AI practitioner with experience across software development, analysis, automation, and content creation.

Development: native iOS and web applications, financial analysis dashboards computing from raw input files, and a health-insight tool that interprets bloodwork and proposes next steps — built with Claude Code and prototyped in Claude Design. **Automation:** schedule management, email triage, and document workflows through AI agents and scheduled tasks. **Content:** executive presentations, image assets, and short-form video production using AI tools including Higgsfield. Proficient in API integration, prompt engineering, and building reusable AI skills and artifacts.

experience

Tangerine · Canada

Mar 2025 – present

Sr. Product Owner — Payments

- Delivered VISA OCT for domestic and cross-border transfers on time using VISA rails, guiding a newly formed team through MVP and incremental delivery to build platform expertise as the initiative progressed.
- Leading Tangerine's implementation of Payments Canada's Real-Time Rail (RTR) industry initiative — delivering incremental upgrades for Send and Receive 3.6, now advancing to 3.7.
- Pioneered a centralized SharePoint documentation hub for the Payments team — synced with Teams (Calendar, Planner) and used as the model for adoption across the organization; produces newsletters recognized for clarity and engagement.
- Built Claude-based artifacts for project estimation, status reporting, and newsletter production, reducing manual reporting effort.

Scotiabank · Canada

Mar 2023 – Mar 2025

Sr. Product Owner — Data & Analytics

- Built the operating model that enabled the first successful consolidation of retail data from nine International Banking countries after years of failed attempts.
- Established a scalable data delivery capability for enterprise KPIs and executive reporting, including the bank's Primacy metric.
- Customer profitability insights identified CAD 47M in potential savings opportunities from unprofitable relationships in Caribbean operations.

Technisys / SoFi · Canada

Jul 2021 – Feb 2023

Product Owner & Agile Delivery Lead (functional descriptor)

- Designed and implemented an Agile delivery methodology for discovery, prioritization and execution, reducing discovery cycles from 5 months to 2–3 weeks.
- Improved early risk identification by 60% through the discovery and delivery framework.

Scotiabank · Canada

May 2017 – Jul 2021

Product Owner & Scrum Master — Retail CRM

- As Scrum Master, joined a high-potential team with strong leadership support and became instrumental in elevating its agile practice — through deep conviction and hands-on coaching — earning top-5 recognition among all agile teams at Scotiabank.
- On my own initiative, conceived and prototyped a next-generation CRM, then led its product vision — cross-channel lead management, AI-driven next best action, and customer-centric flows with full behavioural insights. Secured CAD 3M in investment from Chile through executive roadshows, deployed in Chile and actively expanding across the region.

SAP Consulting · Argentina & Colombia

2006 – 2017

Business Consultant & CoE Supervisor

Lived and worked in Argentina and Colombia, with regional project exposure across Peru, Mexico, Chile and Uruguay.

- Re-engineered procurement and reverse logistics at Claro Colombia — cut procurement times by 66%, saving $750K USD/year in logistics and $180K USD in warehouse costs.
- Built and led a high-performing SAP support team, growing CSAT from 70% to 90% and eliminating a 2-year open backlog within months.

A decade operating in environments where failed implementations halt supply chains — the foundation for how I evaluate risk, scope, and delivery as a Product Owner.
